v. 51-75

1929-53

PREPARED BY JEAN KYLE

PRINTED BY J. H. FURST CO.

INDEX

Adams, Rachel Blodgett

On the approximate solution of Fredholm's homogeneous integral equation, 51, 139-148.

Adkisson, V. W. (and MacLane, Saunders)

Planar graphs whose homeomorphisms can all be extended for any mapping on the sphere, 59, 823-832.

See also MacLane and Adkisson.

Agnew, Ralph Palmer

The behavior of mean-square oscillation and convergence under regular transformations, 53, 204-216.

On summability of double sequences, 54, 648-656.

On summability of multiple sequences, 56, 62-68.

Cores of complex sequences and of their transforms, 61, 178-186.

On oscillations of real sequences and of their transforms by square matrices, 61, 683-699.

On Tauberian theorems for double series, 62, 666-672.

On methods of summability and mass functions determined by hypergeometric coefficients, 63, 705-708.

Euler transformations, 66, 313-338.

On sequences with vanishing even or odd differences, 66, 339-340.

Spans in Lebesgue and uniform spaces of translations of peak functions, 67, 431-436.

Methods of summability which evaluate sequences of zeros and ones summable C_1 , 70, 75-81.

Albert, A. Adrian

Determination of all normal division algebras in thirty-six units of type R_s , 52, 283-292.

On the construction of cyclic algebras with a given exponent, 54, 1-13.

The integers represented by sets of ternary quadratic forms, 55, 274-292.

Normal division algebras of degree 4 over F of characteristic 2, 56, 75-86.

Algebras derived by non-associative matrix multiplication, 66, 30-40.

Albert, O. W.

Relations between the projective and metric differential geometries of surfaces, 55, 181-196.

Alden, H. H.

Solution of $f(x, y)\partial z/\partial x + g(x, y)\partial z/\partial y = 0$ in a neighborhood of a singular point, 56, 593-612.

Allendoerfer, Carl B.

Rigidity for spaces of class greater than one, 61, 633-644.

The Euler number of a Riemann manifold, 62, 243-248.

Amerio, Luigi

Sul calcolo delle soluzioni dei problemi al contorno per le equazioni lineari del secondo ordine di tipo ellittico, 69, 447-489.

Amin, A. Y. See Bishara and Amin.

Amitsur, S. A.

A general theory of radicals. I. Radicals in complete lattices, **74**, 774–786.

Anderson, Nola Lee

An extension of Maschke's symbolism, **51**, 123–138.

Ankeny, N. C.

Representations of primes by quadratic forms, **74**, 913–919.

Arens, Richard

Topologies for homeomorphism groups, **68**, 593–610.

Approximation in, and representation of, certain Banach algebras, **71**, 763–790.

Arf, C.

On the determination of multiply connected domains of an elastic plane body, bounded by free boundaries with constant tangential stresses, **74**, 797–820.

Arnold, H. E.

Concerning the rational curves R_3^5 (*II*) and R_2^4 , **52**, 601–606.

Aronszajn, Nathan (and Weinstein, Alexander)

On the unified theory of eigenvalues of plates and membranes, **64**, 623–645.

Artin, Emil

The free product of groups, **69**, 1–4.

Artin, Emil (and Whaples, George)

The theory of simple rings, **65**, 87–107.

Arwin, A.

Two-dimensional chains, **53**, 91–102.

Avakumović, Vojislav G.

Neuer beweis eines Satzes von G. H. Hardy und S. Ramanujan über das asymptotische Verhalten der Zerfällungskoeffizienten, **62**, 877–880.

Ayres, W. L.

Concerning continuous curves in metric space, **51**, 577–594.

Baer, Reinhold

Primary Abelian groups and their automorphisms, **59**, 99–117.

Abelian fields and duality of Abelian groups, **59**, 869–888.

The significance of the system of subgroups for the structure of the group, **61**, 1–44.

Groups with Abelian norm quotient group, **61**, 700–708.

A Galois theory of linear systems over commutative fields, **62**, 551–588.

Homogeneity of projective planes, **64**, 137–152.

Radical ideals, **65**, 537–568.

Rings with duals, **65**, 569–584.

Crossed isomorphisms, **66**, 341–404.

The homomorphism theorems for loops, **67**, 450–460.

The double chain condition in cyclic operator groups, **69**, 37–45.

Projectivities of finite projective planes, **69**, 653–684.

Extension types of Abelian groups, **71**, 461–490.

Free sums of groups and their generalizations. An analysis of the associative law, **71**, 706–742.

Free sums of groups and their generalizations, II, **72**, 625–646.

Free sums of groups and their generalizations, III, **72**, 647–670.

Nilpotent characteristic subgroups of finite groups, **75**, 633–664.

Bagemihl, Frederick

On the partial products of infinite products of alephs, 70, 207-211 (Errata, 70, 460).

Baker, R. P.

Cayley diagrams on the anchor ring, 53, 645-669.

Banerjee, D. P.

The expansion of an arbitrary function in a series of toroidal functions of the second kind, 64, 72-80.

Bankier, J. D. (and Leighton, Walter)

Numerical continued fractions, 64, 653-668.

Barber, S. F.

Planar Cremona transformations, 56, 109-121.

Barber, S. F. (and Zariski, Oscar)

Reducible exceptional curves of the first kind, 57, 119-141.

Barker, Charles B., Jr.

The Lagrange multiplier rule for two dependent and two independent variables, 67, 256-276.

Barlaz, Joshua

On some triangular summability methods, 69, 139-152.

Basoco, Miguel A.

Fourier developments for certain pseudo-periodic functions in two variables, 54, 242-252.

Basoco, Miguel A. (and Bell, E. T.)

Further theta expansions useful in arithmetic, 57, 1-10.

Basye, R. E.

Some separation properties of the plane, 58, 323-328.

Bateman, H.

A partial differential equation associated with Poisson's work on the theory of sound, 60, 293-296.

Bateman, H. (and Rice, S. O.)

Integrals involving Legendre functions, 60, 297-308.

Baten, William Dowell

A remainder for the Euler-MacLaurin summation formula in two independent variables, 54, 265-275.

Bates, Grace E.

Free loops and nets and their generalizations, 69, 499-550.

Beaumont, Ross A.

Projections of non-Abelian groups upon Abelian groups containing elements of infinite order, 64, 115-136.

Beckenbach, E. F.

Minimal surfaces of uniplanar derivation, 54, 718-728.

Minimal surfaces in Euclidean n -space, 55, 458-468.

Becker, H. W. (and Riordan, John)

The arithmetic of Bell and Stirling numbers, 70, 385-394.

Begle, Edward G.

Locally connected spaces and generalized manifolds, **64**, 553–574.
 Duality theorems for generalized manifolds, **67**, 59–70.

Behrend, F. A.

Some remarks on the distribution of sequences of real numbers, **70**, 547–554.

Bell, Clifford

Alternant surfaces, **56**, 42–46.

Bell, E. T.

On certain finitely solvable equations between arithmetical functions, **51**, 47–50.
 A class of polynomials and rational functions in four variables, **51**, 329–344.
 Numbers of representations in certain quinary quadratic forms, **52**, 271–279.
 The real unit segment as a number field, **52**, 548–550.
 Note on functions of r -th divisors, **53**, 56–60.
 A new type of arithmetical invariance, **54**, 35–38.
 Reciprocal arrays and diophantine analysis, **55**, 50–66.
 Recurrences for certain functions of partitions, **55**, 667–670.
 Doubly periodic functions of the second kind and the arithmetical form $xy + zw$, **57**, 245–253.
 Arithmetical theorems on Lucas functions and Tchebycheff polynomials, **57**, 781–788.
 The form $2ux + ay + yz + zu + ux$, **58**, 282–284.
 The arithmetical function $M(n, f, g)$ and its associates connected with elliptic power series, **58**, 759–768.
 Representations in certain pure forms of degrees higher than the second, **59**, 585–598.
 Generalized Stirling transforms of sequences, **61**, 89–101.
 Postulationary bases for the umbral calculus, **62**, 717–724.
 Interpolated denumerants and Lambert series, **65**, 382–386.
See also Basoco and Bell.

Bell, James H.

Left associates of monic matrices, with an application to unilateral matrix equations, **71**, 249–256.

Bell, Phillip O.

Projective analogues of the congruence of normals, **62**, 680–686.
 The parametric osculating quadrics of a family of curves on a surface, **64**, 343–347.
 Differential geometry of a general motion in the complex projective line, **71**, 427–442.

Bergman, Stefan

On the surface integrals of functions of two complex variables, **63**, 295–318.
 The behavior of the kernel function at boundary points of the second order, **65**, 679–700.
 A remark on the mapping of multiply-connected domains, **68**, 20–28.
 Two-dimensional transonic flow patterns, **70**, 856–891.
 On solutions of linear partial differential equations of mixed type, **74**, 444–474.

Bergman, Stefan (and Schiffer, Menahem)

Bounded functions of two complex variables, **66**, 161–169.

Bernhart, Arthur

Six-rings in minimal five-color maps, **69**, 391–412.
 Another reducible edge configuration, **70**, 144–146.

Bernstein, B. A.

Note on the condition that a Boolean equation have a unique solution, **54**, 417-418.
 On finite Boolean algebras, **57**, 733-742.

See also Foster and Bernstein.

Berry, Andrew C.

Linear metric Lebesgue spaces, **57**, 743-764.

Bers, Lipman

On bounded analytic functions of two complex variables in certain domains with distinguished boundary surface, **64**, 514-530.
 The expansion theorem for sigma-monogenic functions, **72**, 705-712.

Betz, Ebon E.

Accessibility and separation by simple closed curves, **63**, 127-135.

Bing, R. H.

Converse linearity conditions, **68**, 309-318.
 Skew sets, **69**, 493-498.
 Solution of a problem of R. L. Wilder, **70**, 95-98.
 Some characterizations of arcs and simple closed curves, **70**, 497-506.

Bird, Marion T.

On generalizations of sum formulas of the Euler-MacLaurin type, **58**, 487-503.

Birkhoff, Garrett

Abstract linear dependence and lattices, **57**, 800-804.
 Reversibility and two-dimensional airfoil theory, **68**, 247-256.

Birnbaum, Z. W. (and Zuckerman, Herbert S.)

On the properties of a collective, **62**, 787-791.

Bishara, S. (and Amin, A. Y.)

The configuration of Schur quadrics and the parabolic curve of the trinodal cubic surface, **70**, 414-422.

Blackall, Clair J.

On volume integral invariants of non-holonomic dynamical systems, **63**, 155-168.

Blanch, Gertrude

Properties of the Veneroni transformation in S_1 , **58**, 639-645.
 The Veneroni transformation in S_n , **59**, 783-786.

Bliss, Gilbert Ames

The problem of Lagrange in the calculus of variations, **52**, 673-744.

Bliss, Gilbert Ames (and Schoenberg, I. J.)

On separation, comparison and oscillation theorems for self-adjoint systems of linear second order differential equations, **53**, 781-800.

Blumenthal, Leonard M.

Note on fractional operators and the theory of composition, **53**, 483-492.
 A complete characterization of proper pseudo d -cyclic sets of points, **54**, 387-396.
 Concerning regular pseudo d -cyclic sets, **54**, 729-738.
 A chain of determinant theorems arising from the characterization of pseudo r -spheric (S_n) sets, **56**, 225-232.
 Concerning spherical spaces, **57**, 51-61.

Metric methods in determinant theory, 61, 912-922.
 Generalized Euclidean space in terms of a quasi inner product, 72, 686-698.

Blumenthal, Leonard M. (and Garrett, George A.)
 Characterization of spherical and pseudo-spherical sets of points, 55, 619-640.

Blumenthal, Leonard M. (and Thurman, George R.)
 The characterization of pseudo-spherical sets, 62, 835-854.

Boas, R. P., Jr.
 A Tauberian theorem connected with the problem of three bodies, 61, 161-164.
 A completeness theorem, 62, 312-318.
 Some uniqueness theorems for entire functions, 62, 319-324.
 A general moment problem, 63, 361-370.
 A density theorem for power series, 68, 319-320.

Boas, R. P., Jr. (and Smithies, F.)
 On the characterization of a distribution function by its Fourier transform, 60, 523-531.

Boas, R. P., Jr. (and Buck, R. C. and Erdős, P.)
 The set on which an entire function is small, 70, 400-402.

Bôcher, Maxime
 Portrait, 51, facing 495.

Bochner, S.
 Bounded analytic functions in several variables and multiple Laplace integrals, 59, 732-738.

Bochner, S. (and Chandrasekharan, K.)
 Gauss summability of trigonometric integrals, 71, 50-59.

Bochner, S. (and Taylor, A. E.)
 Some theorems on quasi-analyticity for functions of several variables, 61, 303-329.

Bohnenblust, F.
 Subspaces of $l_{p,n}$ spaces, 63, 64-72.

Bohr, H. (and Jessen, B.)
 On the distribution of the values of the Riemann zeta function, 58, 35-44.

Boothby, William M.
 The topology of regular curve families with multiple saddle points, 73, 405-438.
 The topology of the level curves of harmonic functions with critical points, 73, 512-538.

Borel, A. (and Serre, J.-P.)
 Groupes de Lie et puissances réduites de Steenrod, 75, 409-448.

Borg, Göran
 On a Liapounoff criterion of stability, 71, 67-70.
 On the point spectra of $y'' + (\lambda - q(x))y = 0$, 73, 122-126.

Borofsky, S.
 Characterization of a field by a single operation, 71, 92-104.

Bourgin, D. G.
 The clamped square sheet, 61, 417-439.

Some properties of Banach spaces, 64, 597–612.
 Linear topological spaces, 65, 637–659.

Bourgin, D. G. (and Duffin, R. J.)

The Heaviside operational calculus, 59, 489–505.

Brahana, H. R.

On the groups which contain a given invariant subgroup and transform it according to a given operator in its group of isomorphisms, 52, 914–922.

On the groups generated by two operators of orders two and three whose product is of order eight, 53, 891–901.

Prime-power Abelian groups generated by a set of conjugates under a special automorphism, 55, 553–584.

On isomorphisms of the Abelian group of type 1, 1, . . . , 56, 53–61.

On the metabelian groups which contain a given group H as a maximal invariant Abelian subgroup, 56, 490–510.

Metabelian groups and pencils of bilinear forms, 57, 645–667.

Finite metabelian groups and Plücker line-coordinates, 62, 365–379.

Finite metabelian groups and the lines of a projective four-space, 73, 539–555.

Brauer, Alfred

On the non-existence of the Euclidean algorithm in certain quadratic number fields, 62, 697–716.

On a problem of partitions, 64, 299–312.

On the irreducibility of polynomials with large third coefficient, 70, 423–432.

On the irreducibility of polynomials with large third coefficient, II, 73, 717–720.

Brauer, Alfred (and Macon, Nathaniel)

On the approximation of irrational numbers by the convergents of their continued fractions, 71, 349–361.

On the approximation of irrational numbers by the convergents of their continued fractions, II, 72, 419–424.

Brauer, Richard

On groups whose order contains a prime number to the first power, I, 64, 401–420.

On groups whose order contains a prime number to the first power, II, 64, 421–440.

On the representation of a group of order g in the field of the g -th roots of unity, 67, 461–471.

On the zeta-functions of algebraic number fields, 69, 243–250.

Applications of induced characters, 69, 709–716.

On the zeta-functions of algebraic number fields, II, 72, 739–746.

Brauer, Richard (and Weyl, Hermann)

Spinors in n dimensions, 57, 425–449.

Bray, H. E.

Functions of *Ecart Fini*, 51, 149–164.

On the zeros of a polynomial and of its derivatives, 53, 864–872.

Brewer, B. W.

A criterion for solvability by radicals, 63, 119–126.

Brown, Arthur B.

Relations between the critical points of a real analytic function of N independent variables, 52, 251–270.

Topological invariance of sub-complexes of singularities, 54, 117–122.

On Morse's duality relations for manifolds, **54**, 692-698.
 Isolated critical points, **57**, 389-390.

Brown, Bailey (and McCoy, Neal H.)
 Radicals and subdirect sums, **69**, 46-58.

Brown, Ernest W.
 The equations of motion of the moon, **60**, 785-792.

Browne, E. T.
 On the separation property of the roots of the secular equation, **52**, 843-850.
 Sets of conjugate matrices, **59**, 845-868.

Bruck, Richard H.
 The number of absolute invariants of a tensor, **66**, 411-424.

Bruck, Richard H. (and Wade, T. L.)
 Bisymmetric tensor algebra, Part I, **64**, 725-733.
 Bisymmetric tensor algebra, Part II, **64**, 734-752.

Brunk, H. D.
 Dirichlet series meromorphic in a half-plane, **67**, 486-504.

Buchanan, Daniel
 Periodic orbits in the problem of three bodies with repulsive and attractive forces, **52**, 899-913.

Buchanan, H. E.
 On a certain function of the masses in the problem of three bodies, **51**, 595-598.

Buck, Ellen F. (and Buck, R. C.)
 A note on finitely-additive measures, **69**, 413-420.

Buck, R. Creighton
 The measure theoretic approach to density, **68**, 560-580.
 Generalized asymptotic density, **75**, 335-346.
See also Boas, Buck, and Erdős.
See also Buck, Ellen and Buck, R. C.

Burdette, A. C.
 On simultaneous expansions of analytic functions in composite power series, **61**, 295-302.
 On a local solution of a differential equation of infinite order, **63**, 291-294.

Busemann, Herbert
 On translations in general plane geometries, **60**, 227-256.
 On Leibniz's definition of planes, **63**, 101-111.
 Metrically homogeneous spaces, **68**, 340-344.
 The isoperimetric problem in the Minkowski plane, **69**, 863-871.
 The isoperimetric problem for Minkowski area, **71**, 743-762.

Bush, Laurens Earle
 On the equivalence of the decompositions of an algebra with respect to a principal idempotent, **54**, 419-424.

Butchart, J. H.
 Helices in Euclidean n -space, **55**, 126-130.

Byrne, Lee
 Boolean algebra in terms of inclusion, **70**, 139-143.

Cairns, Stewart S.

Normal coordinates for extremals transversal to a manifold, 60, 423-435.

Cameron, R. H. (and Martin, W. T.)

An expression for the solution of a class of non-linear integral equations, 66, 281-298.

Camp, Chester C.

On multiparameter expansions associated with a differential system and auxiliary conditions at several points in each variable, 60, 447-452.

A convergence proof involving an inseparable multiple contour integral, 65, 216-220.

Campaigne, Howard

Partition hypergroups, 62, 599-612.

Carathéodory, C.

On Dirichlet's problem, 59, 709-731.

Carlitz, Leonard

The arithmetic of polynomials in a Galois field, 54, 39-50.

On arrays of numbers, 54, 739-752.

Criteria for certain higher congruences, 59, 618-628.

Some congruences for the Bernoulli numbers, 75, 163-172.

Kummer congruences and the Schur derivative, 75, 699-706.

Some congruences of Vandiver, 75, 707-712.

Carmichael, R. D.

Finite geometries and the theory of groups, 52, 745-788.

Tactical configurations of rank two, 53, 217-240.

Algebras of certain doubly transitive groups, 53, 631-644.

On non-homogeneous linear differential equations of infinite order with constant coefficients, 58, 473-486.

Carroll-Rusk, Evelyn

Systems of involutorial birational transformations contained multiply in special linear line complexes, 54, 707-717.

Cremona involutions defined by a pencil of cubic surfaces, 56, 96-108.

See also Snyder and Carroll-Rusk.

Cassels, J. W. S.

On the equation $a^x - b^y = 1$, 75, 159-162.

Cassity, C. Ronald

On the quartic Del Pezzo surface, 63, 256-262.

Cesari, Lamberto

On the representation of surfaces, 72, 335-346.

An existence theorem of calculus of variations for integrals on parametric surfaces, 74, 265-295.

Chandrasekharan, K. (and Szász, Otto)

On Bessel summation, 70, 709-729.

See also Bochner and Chandrasekharan.

Chang, Shih-Hsun

A class of integro-differential equations, 71, 563-573.

Chanler, Josephine H.

Poristic double binary forms, 56, 529-546.

See also Coble and Chanler.

Chazy, Jean

Sur les avances du noeud et du périhélie d'une planète sous l'action d'une anneau circulaire, **60**, 793–800.

Chen, Kien-Kwong

On the absolute Cesàro summability of negative order for a Fourier series at a given point, **66**, 299–312.

Some relations between the behavior of a function and the absolute summability of its Fourier series, **67**, 239–248.

A generalization of Hardy's theorem with an application to the absolute summability of Fourier series, **67**, 249–255.

Criteria for the absolute convergence of a Fourier series at a given point, **67**, 285–299.

Cheo, Si-Ping

Singularities of analytic vector functions, **57**, 294–300.

Chern, Shiing-shen

On the kinematic formula in the Euclidean space of n dimensions, **74**, 227–236.

On the characteristic classes of complex sphere bundles and algebraic varieties, **75**, 565–597.

Chernoff, Herman

Complex solutions of partial differential equations, **68**, 455–478.

Cherry, T. M.

Topological properties of the solutions of ordinary differential equations, **59**, 957–982.

Chevalley, Claude

An algebraic proof of a property of Lie groups, **63**, 785–793.

A new kind of relationship between matrices, **65**, 521–531.

Chittenden, E. W. (and Robinson, Selby)

On the reducibility of families of subsets and related properties, **55**, 197–206.

Chojnacki, Chaim

A contribution to the four color problem, **64**, 36–54.

Chokhate, Jacques. See Shohat, J.**Chou, P. Y.**

The gravitational field of a body with rotational symmetry in Einstein's theory of gravitation, **53**, 289–308.

Isotropic static solutions of the field equations in Einstein's theory of gravitation, **59**, 754–763.

On the method of finding isotropic static solutions of Einstein's field equations of gravitation, **62**, 43–48.

Chow, Wei-Liang

On compact complex analytic varieties, **71**, 893–914 (Errata, **72**, 624).

Algebraic systems of positive cycles in an algebraic variety, **72**, 247–283 (Errata, **72**, 624).

On the fundamental group of an algebraic variety, **74**, 726–736.

On Picard varieties, **74**, 895–909.

Chung, Kai-lai

Note on some strong laws of large numbers, **69**, 189–192.

Church, Alonzo

An unsolvable problem of elementary number theory, **58**, 345-363.

Churchill, R. V.

On the problem of temperatures in a non-homogeneous bar with discontinuous initial temperatures, **61**, 651-664.

Clifford, A. H.

Matrix representations of completely simple semigroups, **64**, 327-342.

Semigroups containing minimal ideals, **70**, 521-526.

Semigroups without nilpotent ideals, **71**, 834-844.

A class of partially ordered Abelian groups related to Ky Fan's characterizing subgroups, **74**, 347-356.

A class of *d*-simple semigroups, **75**, 547-556.

Clifford, A. H. (and Miller, D. D.)

Semigroups having zero elements, **70**, 117-125.

Coble, Arthur B.

Geometric aspects of the Abelian modular functions of genus four, Part II, **51**, 495-514.

A generalization of the Weddle surface, of its Cremona group, and of its parametric expression in terms of hyperelliptic theta functions, **52**, 439-500.

Hyperelliptic functions and irrational binary invariants, I, **54**, 425-452.

Hyperelliptic functions and irrational binary invariants, II, **55**, 1-21.

Hyperelliptic functions and irrational binary invariants, III, **55**, 349-375.

Cremona's diophantine equations, **56**, 459-489.

Collineation groups in a finite space with a linear and a quadratic invariant, **58**, 15-34.

Ternary and quaternary elimination, **68**, 521-543.

On the expression of an algebraic form in terms of a set of forms with non-zero resultant, **68**, 544-552.

Coble, Arthur B. (and Chanler, Josephine H.)

The geometry of the Weddle manifold W_p , **57**, 183-218.

Coburn, N.

Semi-analytic unitary subspaces of unitary space, **64**, 714-724.

The "independent scalars" in homogeneous turbulence, **74**, 296-306.

Coddington, Earl A. (and Wintner, Aurel)

On the classical existence theorem of analytic differential equations, **71**, 886-892.

Cohen, L. W. (and Goffman, Casper)

On completeness in the sense of Archimedes, **72**, 747-751.

On completeness and category in uniform space, **72**, 752-756.

Cohn, Harvey

Some diophantine aspects of modular functions. I. Essential singularities, **71**, 403-416.

A periodic algorithm for cubic forms, **74**, 821-833.

Cohn, Richard M.

Extensions of difference fields, **74**, 507-530.

Cole, Nancy

The index theorem for a calculus of variations problem in which the integrand is discontinuous, **62**, 249-276.

Cole, Randal H.

Reduction of an n -th order linear differential equation and m -point boundary conditions to an equivalent matrix system, 68, 179-184.

Coleman, J. B.

A test for the type of irrationality represented by a periodic ternary continued fraction, 52, 835-842.

The Jacobian algorithm for periodic continued fractions as defining a cubic irrationality, 55, 585-592.

Comenetz, George

Curvature trajectories, 58, 225-235.

The limit of the ratio of arc to chord, 64, 695-713.

Conrad, Paul F.

Embedding theorems for Abelian groups with valuations, 75, 1-29.

Coolidge, Julian L.

Systems of rational curves, 65, 257-262.

Cooper, Elizabeth Morgan

Perspective elliptic curves, 53, 555-572.

Cope, Frances Thorndike

Formal solutions of irregular linear differential equations, Part I, 56, 411-437.

Formal solutions of irregular linear differential equations, Part II, 58, 130-140.

Cope, Thomas Freeman

An analogue of Jacobi's condition for the problem of Mayer with variable end points, 59, 655-672.

Copeland, Arthur H.

Independent event histories, 51, 612-618.

Admissible numbers in the theory of geometrical probability, 53, 153-162.

Point set theory applied to the random selection of the digits of an admissible number, 58, 181-192.

Postulates for the theory of probability, 63, 741-762.

Cowling, V. F.

Analytic continuation of factorial series, 71, 283-286.

Cox, Mary Jane

On necessary conditions for relative minima, 66, 170-198.

Coxeter, H. S. M.

The polytope 2_{21} , whose twenty-seven vertices correspond to the lines on the general cubic surface, 62, 457-486.

Craig, Allen T.

On the distributions of certain statistics, 54, 353-366.

Note on a certain bilinear form that occurs in statistics, 58, 864-866.

Craig, H. V.

On a generalized tangent vector, 57, 457-462.

On a generalized tangent vector, II, 58, 833-846.

On tensors relative to the extended point transformation, 59, 764-774.

On extensors and a Euclidean basis for higher order spaces, 61, 791-808.

Craig, H. V. (and Guy, William T., Jr.)
Jacobian extensors, 72, 229-246.

Cronin, Jane
A definition of degree for certain mappings in Hilbert space, 73, 763-772.

Crosby, W. J. R.
Generic algebras, 69, 333-347.

Curry, H. B.
An analysis of logical substitution, 51, 363-384.
Grundlagen der kombinatorischen Logik, Teil I, 52, 509-536.
Grundlagen der kombinatorischen Logik, Teil II, 52, 789-834.
Some additions to the theory of combinators, 54, 551-558.
A formalization of recursive arithmetic, 63, 263-282.

Curtis, Charles W.
On additive ideal theory in general rings, 74, 687-700.

Daly, J. F.
On those points of an algebraic manifold not reachable by a given parametric representation, 59, 359-362.

Daus, P. H.
Normal ternary continued fraction expansions for cubic irrationalities, 51, 67-98.

Davenport, H.
On sums of positive integral k -th powers, 64, 189-198.
On Waring's problem for fifth and sixth powers, 64, 199-207.

Davids, Norman
Minimal surfaces spanning closed manifolds and having prescribed topological position, 64, 348-362.

Davis, Hannibal Albert
Involutorial transformations belonging to a linear complex, 52, 53-71.
Non-involutorial birational transformations belonging to a special linear line complex, 53, 72-80.

Davis, Harold T.
Differential equations of infinite order with constant coefficients, 52, 97-108.

Davis, Phillip
An application of the theory of basic series to theorems of Bernstein-Widder type, 72, 787-791.
On the applicability of linear differential operators of infinite order to functions of class $L^2(B)$, 74, 475-491.

Dean, Mildred Waters
A system of six rectangular biquadratics, 52, 585-600.

De Bruijn, N. G.
The asymptotically periodic behavior of the solutions of some linear functional equations, 71, 313-330.

De Cicco, John
Conformal maps with isothermal systems of scale curves, 68, 137-146.
Union-preserving transformations of higher order surface-elements, 69, 104-116.
See also Kasner and De Cicco.

Denjoy, Arnaud
Une extension du théorème de Vitali, **73**, 314-356.

Derry, D.
Remarks on a conjecture of Minkowski, **62**, 61-66.

Dexter, Glenn Edward
The calculus of non-contradiction, **65**, 171-178.

Diaz, Joaquin B.
On a class of partial differential equations of even order, **68**, 611-659.

Diaz, Joaquin B. (and Weinstein, A.)
The torsional rigidity and variational methods, **70**, 107-116.

Dickinson, Alice
Compactness conditions and uniform structures, **75**, 224-228.

Dickson, L. E.
Minimum decompositions into n -th powers, **55**, 593-602.
Two-fold generalizations of Cauchy's lemma, **56**, 513-528.
Cyclotomy, higher congruences, and Waring's problem, **57**, 391-424.
Cyclotomy, higher congruences, and Waring's problem, II, **57**, 463-474.
Waring theorems of new type, **58**, 241-248.
Proof of the ideal Waring theorem for exponents 7-180, **58**, 521-529.
Solution of Waring's problem, **58**, 530-535.

Dieudonné, Jean
On topological groups of homeomorphisms, **70**, 659-680.
Linearly compact spaces and double vector spaces over fields, **73**, 13-19.
Orthogonal and unitary groups over the rational field, **73**, 940-948.
On the structure of unitary groups (II), **75**, 665-678.

Dines, L. L.
The resultant of two power series in two variables, **51**, 349-362.

Doob, J. L. (and Leibler, R. A.)
On the spectral analysis of a certain transformation, **65**, 263-272.
See also Ritt and Doob.

Dorroh, J. L.
Some metric properties of descriptive planes, **53**, 401-421 (Errata, **53**, 936).

Doss, Raouf
On uniform spaces with a unique structure, **71**, 19-23.
Some theorems on almost periodic functions, **72**, 81-92.

Doss, Shafik (and Nasr, Saad K.)
On the functional equation $dy/dx = f(x, y(x), y(x+h))$, $h > 0$, **75**, 713-716.

Douglas, Jesse
Green's function and the problem of Plateau, **61**, 545-589.
The most general form of the problem of Plateau, **61**, 590-608.

Dowker, C. H.
Mapping theorems for non-compact spaces, **69**, 200-242.
Topology of metric complexes, **74**, 555-577.

Dresher, Melvin (and Ore, Oystein)
Theory of multigroups, **60**, 705-733.

Dressel, F. G.

A boundary value problem for the heat equation, 55, 641-653.

Dressel, F. G. (and Elliott, E. R.)

A class of solutions for the heat equation and associated boundary value problems, 65, 408-422.

Dubisch, Roy (and Perlis, Sam)

The radical of an alternative algebra, 70, 540-546.

On total nilpotent algebras, 73, 439-452.

Duffahel, Maurice de

Gegenbauer functions with a negative index, 57, 918-920.

Duffin, R. J. See Bourgin and Duffin.**Duffin, R. J. (and Schaeffer, A. C.)**

Power series with bounded coefficients, 67, 141-154.

Duncan, D. G. See Thrall and Duncan.**Durfee, Walter H.**

Summation factors which are powers of a complex variable, 53, 817-842.

Dushnik, Ben (and Miller, E. W.)

Partially ordered sets, 63, 600-610.

Du Val, Patrick

Reducible exceptional curves, 58, 285-289.

The unloading problem for plane curves, 62, 307-311.

Dvoretzky, Aryeh

On monotone series, 70, 167-173.

Dwyer, W. A.

On certain fundamental identities due to Uspensky, 59, 290-294.

Dye, L. A. (and Sharpe, F. R.)

The quartic space involutorial transformations with a double conic, 54, 499-504.

Eaton, J. E.

Associative multiplicative systems, 62, 222-232 (Errata, 62, 912).

Eaton, J. E. (and Ore, Oystein)

Remarks on multigroups, 62, 67-71 (Errata, 62, 912).

Eddington, Sir Arthur Stanley

The cosmical constant and the recession of the nebulae, 59, 1-8.

Eilenberg, Samuel

Ordered topological spaces, 63, 39-45.

Continua of finite linear measure, II, 66, 425-427.

On Dirichlet series involving random coefficients, **61**, 955-964.

An asymptotic formula for exponential integrals, **62**, 115-121.

Normal distributions and the law of the iterated logarithm, **63**, 584-588.

On the solutions of an ordinary differential equation near a singular point, **68**, 495-504.

On the ergodic theorems, **69**, 193-199.

Systems of total differential equations and Liouville's theorem on conformal mappings, **69**, 327–332.
 Tauber's theorem and absolute constants, **69**, 599–606.
 On a theorem of Milloux, **70**, 395–399.
 On the linear logarithmico-exponential differential equation of the second order, **70**, 764–779.
 On the spectra of slightly disturbed linear oscillators, **71**, 71–79.
 A characterization of the spectra of one-dimensional wave equations, **71**, 915–920.
 On the local uniqueness of geodesics, **72**, 723–730.
 The number of L^2 -solutions of $x'' + q(t)x = 0$, **73**, 635–645 (Errata, **73**, 963).
 On bounded Green's kernels for second order linear ordinary differential equations, **73**, 646–656.
 On the eigenvalues of differential equations, **73**, 657–662.
 On geodesic coordinates, **73**, 949–954.
 On linear second order differential equations with small coefficients, **73**, 955–962.
 Some examples in the theory of singular boundary value problems, **74**, 107–126.
 On unsmooth two-dimensional Riemannian metrics, **74**, 215–226.
 On non-oscillatory linear differential equations of second order, **74**, 389–400.
 On the derivatives of solutions of linear, second order, ordinary differential equations, **75**, 173–177.
 On the essential spectra of symmetric operators in Hilbert space, **75**, 229–240.

Hartman, Philip (and Kershner, Richard)
 The structure of monotone functions, **59**, 809–822.
 Integral forms and variational orthogonality, **60**, 205–226.
 On the Fourier-Stieltjes transform of a singular function, **60**, 459–462.
 On upper limit relations for number theoretical functions, **62**, 780–786.

Hartman, Philip (and Putnam, Calvin R.)
 The least cluster point of the spectrum of boundary value problems, **70**, 849–855.
 The gaps in the essential spectra of wave equations, **72**, 849–862.

Hartman, Philip (and Wintner, Aurel)
 Asymptotic distributions and the ergodic theorem, **61**, 977–984.
 Statistical independence and statistical equilibrium, **62**, 646–654.
 On the standard deviations of additive arithmetical functions, **62**, 743–752.
 On the almost periodicity of additive number-theoretical functions, **62**, 753–758.
 On the spherical approach to the normal distribution law, **62**, 759–770.
 On the law of the iterated logarithm, **63**, 169–176.
 On the convexity of averages of analytic almost periodic functions, **63**, 581–583.
 On the infinitesimal generators of integral convolutions, **64**, 273–298.
 Integrability in the large and dynamical stability, **65**, 273–278.
 On the asymptotic behavior of the solutions of a non-linear differential equation, **68**, 301–308.
 On Möbius' inversion, **69**, 853–858.
 The asymptotic arcus variation of solutions of real linear differential equations of second order, **70**, 1–10.
 Criteria of non-degeneracy for the wave equation, **70**, 295–308.
 On the orientation of unilateral spectra, **70**, 309–316.
 On the asymptotic problems of the zeroes in wave mechanics, **70**, 461–480.
 On non-conservative linear oscillators of low frequency, **70**, 529–539.
 A criterion for the non-degeneracy of the wave equation, **71**, 206–213.

On the location of spectra of wave equations, 71, 214–217.
 On the Laplace-Fourier transcedents, 71, 367–372.
 Oscillatory and non-oscillatory linear differential equations, 71, 627–649.
 A separation theorem for continuous spectra, 71, 650–662.
 On the classical existence theorem of linear differential equations, 71, 859–864.
 Separation theorems for bounded Hermitian forms, 71, 865–878.
 On linear difference equations of second order, 72, 124–128 (Errata, 72, 624).
 On the derivatives of the solutions of one-dimensional wave equations, 72, 148–156.
 On non-linear differential equations of first order, 72, 347–358.
 On the spectra of Toeplitz's matrices, 72, 359–366.
 On the solutions of the equation of heat conduction, 72, 367–395.
 On the essential spectra of singular eigenvalue problems, 72, 545–552.
 On the embedding problem in differential geometry, 72, 553–564.
 On the fundamental equations of differential geometry, 72, 757–774.
 Lamé coordinates in Hilbert space, 72, 775–786.
 On the problems of geodesics in the small, 73, 132–148.
 On the asymptotic curves of a surface, 73, 149–172.
 On the classical transcedents of mathematical physics, 73, 381–389.
 On the non-increasing solutions of $y'' = f(x, y, y')$, 73, 390–404.
 Gaussian curvature and local embedding, 73, 876–884.
 On an oscillation criterion of Liapounoff, 73, 885–890.
 On perturbations of the continuous spectrum of the harmonic oscillator, 74, 79–85.
 On the embedding of hyperbolic line elements; a correction, 74, 264.
 On geodesic torsions and parabolic and asymptotic curves, 74, 607–625.
 On the theory of geodesic fields, 74, 626–644.
 On hyperbolic partial differential equations, 74, 834–864.
 On the behavior of the solutions of real binary differential systems at singular points, 75, 117–126.
 On the curvatures of a surface, 75, 127–141.
 Envelopes and discriminant curves, 75, 142–158.
 On the existence of Riemannian manifolds which cannot carry non-constant analytic or harmonic functions in the small, 75, 260–276 (Errata, 75, 690).
 On the singularities in nets of curves defined by differential equations, 75, 277–297.
 On the third fundamental form of a surface, 75, 298–334.
 On the local behavior of solutions of non-parabolic partial differential equations, 75, 449–476.
 On pieces of convex surfaces, 75, 477–487.
 On asymptotic parametrizations, 75, 488–496.
 On the inverse of the parabolic differential operator $\partial^2/\partial x^2 - \partial/\partial t$, 75, 598–610.
 On elliptic Monge-Ampère equations, 75, 611–620.
 On non-oscillatory linear differential equations, 75, 717–730.
 Linear differential and difference equations with monotone solutions, 75, 731–743.

Hartman, Philip (and van Kampen, E. R. and Wintner, Aurel)
 Mean motions and distribution functions, 59, 261–269.
 On the distribution functions of almost periodic functions, 60, 491–500.
 Asymptotic distributions and statistical independence, 61, 477–486.

Harvey, A. R.
 The mean of a function of exponential type, 70, 181–202.

Hausmann, B. A. (and Ore, Oystein)
 Theory of quasi-groups, 59, 983–1004.

Haviland, E. K.

A note on the convergence of the successive approximations to the solution of an ordinary differential equation, **54**, 632–634.

On the addition of convex curves in Bohr's theory of Dirichlet series, **55**, 332–334.

On the theory of absolutely additive distribution functions, **56**, 625–658.

On the inversion formula for Fourier-Stieltjes transforms in more than one dimension, **57**, 94–100.

On the inversion formula for Fourier-Stieltjes transforms in more than one dimension, II, **57**, 382–388.

On the momentum problem for distribution functions in more than one dimension, **57**, 562–568.

A note on a property of Fourier-Stieltjes transforms in more than one dimension, **57**, 569–572.

On the momentum problem for distribution functions in more than one dimension, II, **58**, 164–168.

Asymptotic probability distributions and harmonic curves, **61**, 947–954.

On an asymptotic formula for the Fourier transforms of distributions on certain curves, **62**, 655–665.

On the distribution functions of the reciprocal of a function and of a function reduced mod 1, **63**, 408–414.

On the singularities and the qualitative behavior of the solutions of the problem of central forces, **65**, 477–491.

A note on the Lambert transform, **66**, 523–530.

On the asymptotic behavior of the Riemann ξ -function, **67**, 411–416.

A note on Laplace transforms of functions whose spectra are confined to a given set, **69**, 279–285.

Haviland, E. K. (and Wintner, Aurel)

On the Fourier-Stieltjes transform, **56**, 1–7.

A note on the Kronecker-Weyl theorem, **58**, 17–24.

Hedlund, Gustav A.

A metrically transitive group defined by the modular group, **57**, 668–678.

A new proof for a metrically transitive system, **62**, 233–242.

Sturmian minimal sets, **66**, 605–620.

See also Morse and Hedlund.

Hedrick, E. R. (and Whyburn, W. M.)

An application of the Dedekind cut notion to integration, **55**, 390–398.

Heins, Albert E.

On the solution of partial difference equations, **63**, 435–442.

Water waves over a channel of finite depth with a dock, **70**, 730–748.

Heins, Maurice H.

Extremal problems for functions analytic and single-valued in a doubly-connected region, **62**, 91–106.

On the iteration of functions which are analytic and single-valued in a given multiply-connected region, **63**, 461–480.

The problem of Milloux for functions analytic throughout the interior of the unit circle, **67**, 212–234.

Herstein, Israel Nathan

Divisor algebras, **71**, 800–822.

A generalization of a theorem of Jacobson, 73, 756–762.
 A generalization of a theorem of Jacobson, III, 75, 105–111.
 The structure of a certain class of rings, 75, 864–871.

Herzog, Fritz (and Hill, J. D.)
 The Bernstein polynomials for discontinuous functions, 68, 109–124.

Hestenes, Magnus R.
 The problem of Bolza in the calculus of variations in parametric form, 58, 391–406.
 A theory of critical points, 67, 521–562.
 Sufficient conditions for multiple integral problems in the calculus of variations, 70, 239–276.

Hickey, Deborah May
 A three-dimensional treatment of groups of linear transformations, 54, 635–647.

Hill, George William
 Portrait, frontispiece, 60, Number 4, 785.

Hill, J. D.
 Nörlund methods of summability that include the Cesàro methods of all positive orders, 67, 94–98.
 Summability methods weaker than convergence, 72, 621–623.
See also Hamilton and Hill.
See also Herzog and Hill.

Hilmy, Heinrich
 Sur les mouvements des systèmes dynamiques qui admettent “l’incompressibilité” des domaines, 59, 803–808.
 Sur les théorèmes de récurrence dans la dynamique générale, 61, 149–160.

Hinrichsen, J. J. L.
 Note on potential theory in n -space, 57, 921–927.

Hirschman, I. I., Jr.
 On the behaviour of Fourier transforms at infinity and on quasi-analytic classes of functions, 72, 200–213.
 On the distributions of the zeros of functions belonging to certain quasi-analytic classes, 72, 396–406 (Errata, 73, 963).
 On non-uniformly quasi-analytic functions, 72, 863–867.
 On approximation by non-dense sets of translates, 73, 773–778.
 Fractional integration, 75, 531–546.

Hochschild, G.
 Semi-simple algebras and generalized derivations, 64, 677–694.
 Double vector spaces over division rings, 71, 443–460.
 Lie algebras and differentiations in rings of power series, 72, 58–80.

Hoel, Paul G.
 Certain problems in the theory of closest approximation, 57, 891–901.

Hölder, Ernst
 Die symmetrischen periodischen Bahnen des restringierten Dreikörperproblems in der Nachbarschaft eines kritischen Keplerkreises, 60, 801–814.
 Zusätzliche Stabilitätsbetrachtung betreffend “Die symmetrischen periodischen Bahnen des restringierten Dreikörperproblems in der Nachbarschaft eines kritischen Keplerkreises,” 72, 157–160.

Hollcroft, Temple Rice

Pencils of hypersurfaces, 53, 929-936.

Holyoke, T. C.

On the structure of multiply transitive permutation groups, 74, 787-796.

Hopkins, C.

Finite groups in which conjugate operations are commutative, 51, 35-41.

Hostinsky, L. Aileen

Direct decompositions in lattices, 73, 741-755.

Hotelling, HaroldTubes and spheres in n -spaces, and a class of statistical problems, 61, 440-460.**Hsiung, Chuan-Chih**

A study on the theory of conjugate nets, 69, 379-390.

Projective theory of surfaces and conjugate nets in four-dimensional space, 69, 607-621.

Differential geometry of a surface at a parabolic point, 70, 333-344.

Invariants of intersection of certain pairs of curves in n -dimensional space, 71, 678-686.

Affine invariants of a pair of hypersurfaces, 71, 879-882.

Hsu, Leetch C.

Approximations to a class of double integrals of functions of large numbers, 70, 698-708.

Generalized Stieltjes-Post inversion formula for integral transforms involving a parameter, 73, 199-210.

On the asymptotic evaluation of a class of multiple integrals involving a parameter, 73, 625-634.

Hu, Sze-tsen

Structure of the homotopy groups of mapping spaces, 71, 574-586.

Cohomology relations in principal fiber spaces, 75, 60-78.

Hua, Loo-Keng

On Waring's problem with polynomial summands, 58, 553-562.

On the theory of automorphic functions of a matrix variable. I—Geometrical basis, 66, 470-488.

On the theory of automorphic functions of a matrix variable. II—The classification of hypercircles under the symplectic group, 66, 531-563.

Hua, L. K. (and Shih, W. T.)On the lack of an Euclidean algorithm in $R(\sqrt{61})$, 67, 209-211.**Huff, Gerald B.**

Discontinuous groups associated with the Cremona groups, 58, 627-636.

A geometry associated with Cremona's equations, 62, 855-867.

An arithmetic characterization of proper characteristics of linear systems, 68, 681-688.

Hughes, Howard K.

On the analytical extension of functions defined by factorial series, 53, 757-780.

See also Miller and Hughes.

Hughes, Olive Margaret

A certain mixed linear integral equation, 57, 861-882.

Hull, Ralph

On the units of indefinite quaternion algebras, **61**, 365–374.

Hummel, Paul M.

Proof of a theorem of Lehmer, **59**, 50–54.

Hurwitz, Wallie Abraham

The oscillation of a sequence, **52**, 611–616.

Hyers, D. H. *See* Michal and Hyers.**Igusa, Jun-ichi**

On the Picard varieties attached to algebraic varieties, **74**, 1–22.

Ingham, A. E.

On two conjectures in the theory of numbers, **64**, 313–319.

Ingraham, Mark H. (and Trimble, H. C.)

On the matrix equation $TA = BT + C$, **63**, 9–28.

Ingraham, Mark H. (and Wolf, M. C.)

Convergence of a sequence of linear transformations, **60**, 107–119.

Ingraham, Richard L.

The geometry of the linear partial differential equation of the second order, **75**, 691–698.

Jackson, Dunham

Problems of approximation with integral auxiliary conditions, **55**, 153–166.

The convergence of some non-linear processes of approximation, **55**, 515–524.

Problems of closest approximation on a two-dimensional region, **60**, 436–446.

Jackson, James R.

On homotopy groups of function spaces, **74**, 241–252.

Jackson, S. B.

The four-vertex theorem for spherical curves, **62**, 795–812.

The four-vertex theorem for surfaces of constant curvature, **67**, 563–582.

Geodesic vertices on surfaces of constant curvature, **72**, 161–186.

Jacobson, N.

Totally disconnected locally compact rings, **58**, 433–449.

A note on topological fields, **59**, 889–894.

Normal semi-linear transformations, **61**, 45–58.

Classes of restricted Lie algebras of characteristic p , I, **63**, 481–515.

An extension of Galois theory to non-normal and non-separable fields, **66**, 1–29.

Relations between the composites of a field and those of a subfield, **66**, 636–644.

Galois theory of purely inseparable fields of exponent one, **66**, 645–648.

The radical and semi-simplicity for arbitrary rings, **67**, 300–320.

A note on division rings, **69**, 27–36.

Isomorphisms of Jordan rings, **70**, 317–326.

Lie and Jordan triple systems, **71**, 149–170.

A note on Lie algebras of characteristic p , **74**, 357–359.

Jaeger, Chester G.

A character symbol for primes relative to a cubic field, **52**, 85–96.

James, R. D.

The representation of integers as sums of values of cubic polynomials, **56**, 303–315.

On the number of representations of an integer as a sum of $2h$ squares, 58, 536–544.
 The representation of integers as sums of values of cubic polynomials, II, 59, 393–398.
 The distribution of integers represented by quadratic forms, 60, 737–744.

James, R. D. (and Weyl, H.)

Elementary note on prime number problems of Vinogradoff's type, 64, 539–552.

Jeffery, R. L.

The uniform approximation of a sequence of integrals, 53, 61–71.

Jenkins, James A.

On an inequality of Golusin, 73, 181–185.

Generalization of a theorem of Mandelbrojt, 73, 807–812.

On values omitted by univalent functions, 75, 406–408.

Symmetrization results for some conformal invariants, 75, 510–522.

Jenkins, James A. (and Morse, Marston)

Contour equivalent pseudoharmonic functions and pseudoconjugates, 74, 23–51.

Jerbert, A. R.

Triads of plane curves, 51, 99–108.

Quadruples of space curves, 52, 137–149.

Jessen, B. See Bohr and Jessen.

John, Fritz

A representation of Stieltjes integrals by conditionally convergent series, 59, 379–384.

The Dirichlet problem for a hyperbolic equation, 63, 141–154.

Johnson, Marie M.

Tensors of the calculus of variations, 53, 103–116.

Johnson, Roberta F.

Involutions of order two associated with the surfaces of genera $p_a = p_g = 0$, $P_a = 1$,
 $P_g = 0$, 56, 199–213.

Jones, Burton W.

On Selling's method of reduction for positive ternary quadratic forms, 54, 14–34.

Certain consequences of the Jordan curve theorem, 63, 531–544.

Aposyndetic continua and certain boundary problems, 63, 545–553.

Concerning non-aposyndetic continua, 70, 403–413.

Jónsson, Bjarni

Boolean algebras with operators, Part II, 74, 127–162.

Jónsson, Bjarni (and Tarski, Alfred)

Boolean algebras with operators, Part I, 73, 891–939.

Kac, M.

Note on power series with big gaps, 61, 473–476.

On a characterization of the normal distribution, 61, 726–728.

Almost periodicity and the representation of integers as sums of squares, 62, 122–126.

On the distribution of values of trigonometric sums with linearly independent frequencies, 65, 609–615.

See also Erdős and Kac.

Kac, M. (and van Kampen, E. R.)

Circular equidistributions and statistical independence, 61, 677–682.

Newsom, C. V.

On the character of certain entire functions in distinct portions of the plane, **60**, 561-572.
The asymptotic behavior of a class of entire functions, **65**, 450-454.

Niven, Ivan

On a certain partition function, **62**, 353-364.
Two observations concerning algebraic equations for matrices, **65**, 660-662.
An unsolved case of the Waring problem, **66**, 137-143.

Northrop, E. P.

An operational solution of the Maxwell field equations, **58**, 195-224.

Nyswander, J. A.

A direct treatment of systems of linear differential equations whose coefficients have uniform singularities, **51**, 247-264.

Oakley, Cletus Odia

Differential equations containing absolute values of derivatives, **52**, 659-672.

O'Connor, R. E. (and Pall, G.)

The quaternion congruence $tat \equiv b \pmod{g}$, **61**, 487-508.

Oldenburger, Rufus

Real canonical binary trilinear forms, **59**, 427-435.
Repeated linear factors of forms, **64**, 592-596.

Olds, C. D.

On the number of representations of the square of an integer as the sum of three squares, **63**, 763-767.

Ollmann, Loyal F.

Solution of a problem of Ayres, **64**, 61-71.

O'Neill, Barrett

Essential sets and fixed points, **75**, 497-509.

Ore, Oystein. See Dreshner and Ore; Eaton and Ore; Hausmann and Ore; Murdoch and Ore.**Overholtzer, Gordon**

Sum functions in elementary p -adic analysis, **74**, 332-346.

Owens, O. G.

Uniqueness of solutions of ultrahyperbolic partial differential equations, **69**, 184-188.
Homogeneous Dirichlet problem for inhomogeneous ultrahyperbolic equation, **74**, 307-316.

Pa, Chenkuo

The projective theory of surfaces in ruled space, I, **65**, 712-736.

The projective theory of surfaces in ruled space, II, 68, 101–114.

A generalization of associate quadrics of a surface, 68, 115–121.

A new definition of the Godeaux sequence of quadrics, 69, 117–120.

Pall, Gordon

Large positive integers are sums of four or five values of a quadratic function, 54, 66–78.

Binary quadratic discriminants differing by square factors, 57, 789–799.

The quaternionic congruence $tat \equiv b \pmod{g}$ and the equation $h(8n+1) = x_1^2 + x_2^2 + x_3^2$, 59, 895–913.

Quaternions and sums of three squares, 64, 503–513.

The completion of a problem of Kloosterman, 68, 47–58.

See also O'Connor and Pall.

See also Ross and Pall.

Pan, T. K.

Hypergeodesics and dual hypergeodesics, 73, 556–568.

Normal curvature of a vector field, 74, 955–966.

Park, Russell Smith

On certain identities in theta functions, 53, 855–863.

Patterson, Boyd C. *See* Morley and Patterson.

Peck, L. G.

Diophantine equations in algebraic number fields, 71, 387–402.

On cube coverings of n -space, 72, 720–722.

Perkins, F. W.

Certain mean value theorems, with applications in the theory of harmonic and subharmonic functions, 61, 217–230.

Perlman, Irwin E.

Indefinitely differentiable functions in several real variables, 64, 441–446.

Perlis, Sam. *See* Dubisch and Perlis.

Peters, Joseph William

Invariants of sets of points under inversion, 51, 599–611.

Peters, R. M.

Parallelism and equidistance in Riemannian geometry, 57, 103–111.

Parallelism and equidistance of congruences of curves of orthogonal enneuples, 59, 564–574.

Peterson, T. S.

A class of invariant functionals of quadratic functional forms, 51, 417–430.

Pettis, B. J.

Uniform Cauchy points and points of equicontinuity, 73, 602–614.

Phillips, R. S.

On weakly compact subsets of a Banach space, 65, 108–136.

Phillips, R. S. (and Malin, Henry)

Bessel function approximations, 72, 407–418.

Pierpont, James

On the motion of a rigid body about a fixed point in space of constant curvature, 51, 287-294.
Cayley's definition of non-Euclidean geometry, 53, 117-126.

Pitt, H. R.

An extension of Wiener's general Tauberian theorem, 60, 532-534.

Pixley, Henry H.

Discontinuous solutions in the problem of depreciation and replacement, 52, 851-862.

Pleijel, Åke

Asymptotic relations for the eigenfunctions of certain boundary problems of polar type, 70, 892-907.

Polley, Joseph Crawford

Rational surfaces defined by linear systems of plane curves $C_m : 8A^nB^{n-1}$, 52, 877-888.

Pólya, G. (and Szegö, G.)

Inequalities for the capacity of a condenser, 67, 1-32.

Poole, A. R.

Finite ova, 59, 23-32.

Poor, Vincent C.

On circulation functions, 61, 833-842.
Complex functions possessing differentials, 68, 147-160.

Poritsky, Hillel

On operations permutable with the Laplacian, 54, 667-691.

Post, Emil L.

Formal reductions of the general combinatorial decision problem, 65, 197-215.

Prager, W. See Greenberg and Prager.**Prenowitz, Walter**

Projective geometries as multigroups, 65, 235-256.

Price, G. Baley

A class of dynamical systems on surfaces of revolution, 54, 753-768.
On the Strömgren-Wintner natural termination principle, 55, 303-308.
The generalized double pendulum, 57, 928-936.
A class of monotone functions, 61, 941-946.
A generalization of a metric space with applications to spaces whose elements are sets, 63, 46-56.

Puckett, W. T., Jr.

Concerning local connectedness under the inverse of certain continuous transformations, 61, 750-756.

See also Hall and Puckett.

Purcell, Edwin J.

Involutorial space Cremona transformations determined by non-linear null reciprocities, 55, 381-389.

Variety congruences of order one in n -dimensional space, 68, 621-635.

Putnam, C. R.

An application of spectral theory to a singular calculus of variations problem, 70, 780-803.

On the spectra of certain boundary value problems, **71**, 109–111.
 The cluster spectra of bounded potentials, **71**, 612–620.
 On isolated eigenfunctions associated with bounded potentials, **72**, 135–147.
 On commutators of bounded matrices, **73**, 127–131.
 On normal operators in Hilbert space, **73**, 357–362.
 The spectra of quantum-mechanical operators, **74**, 377–388.
 On the unboundedness of the essential spectrum, **74**, 578–586.
See also Hartman and Putnam.

Putnam, C. R. (and Wintner, Aurel)

Linear differential equations with almost periodic or Laplace transform coefficients, **73**, 792–806.
 The orthogonal group in Hilbert space, **74**, 52–78.

Rabinow, David G.

Independent sets of postulates for Abelian groups and fields in terms of the inverse operations, **59**, 211–224 (Errata, **59**, 392).
 Note on the definition of fields by independent postulates in terms of the inverse operations, **59**, 385–392.

Rademacher, Hans

Some remarks on F. John's identity, **58**, 160–176.
 The Fourier coefficients of the modular invariant $J(\tau)$, **60**, 501–512.
 The Fourier series and the functional equation of the absolute modular invariant $J(\tau)$, **61**, 237–248 (Errata, **64**, 456).
 On the Bloch-Landau constant, **65**, 387–390.

Rademacher, Hans (and Whiteman, Albert)

Theorems on Dedekind sums, **63**, 377–407.

Radó, Tibor

The isoperimetric inequality on the sphere, **57**, 765–770.
 A remark on the area of surfaces, **58**, 598–606.
 On a problem of Geöcze, **65**, 361–381.

Radó, T. (and Reichelderfer, P.)

On a stretching process for surfaces, **61**, 645–650.

Rainich, G. Y. See Fulton and Rainich.**Rainville, Earl D.**

Linear differential invariance under an operator related to the Laplace transformation, **62**, 391–405.
 A discrete group arising in the study of differential operators, **63**, 136–140.

Rajagopal, C. T.

On Riesz summability and summability by Dirichlet's series, **69**, 371–378.
 On Riesz summability and summability by Dirichlet's series: addendum et corrigendum, **69**, 851–852 (Errata, **70**, 908).
 Some limit theorems, **70**, 157–166 (Errata, **70**, 908).

Ramanathan, K. G.

The theory of units of quadratic and Hermitian forms, **73**, 233–255.

Rasmussen, Ruth B.

The canonical lines and the extremals of two invariant integrals, **61**, 1004–1008.

Rawles, Thomas H.

On the inverse problem in the calculus of variations, **52**, 72-74.

Rees, Mina S.

Division algebras associated with an equation whose group has four generators, **54**, 51-65.

Regan, Francis

The application of the theory of admissible numbers to time series with variable probability, **58**, 867-873.

Reichelderfer, P. *See* Radó and Reichelderfer.**Reid, William T.**

Generalized Green's matrices for compatible systems of differential equations, **53**, 443-459.

A boundary value problem associated with the calculus of variations, **54**, 769-790.

On boundary value problems associated with double integrals in the calculus of variations, **54**, 791-801.

Discontinuous solutions in the non-parametric problem of Mayer in the calculus of variations, **57**, 69-93.

The theory of the second variation for the non-parametric problem of Bolza, **57**, 573-586.

An integro-differential boundary value problem, **60**, 257-292.

Green's lemma and related results, **63**, 563-574.

A matrix differential equation of Riccati type, **68**, 237-246 (Addendum, **70**, 460).

Expansion methods for the isoperimetric problem of Bolza in non-parametric form, **71**, 946-975.

Rein, Natalie

Note on a result of M. H. Martin concerning a particular mass ratio in the restricted problem of three bodies, **58**, 735-736.

Reiner, M.

A mathematical theory of dilatancy, **67**, 350-362 (Errata, **68**, 672, n. 2).

The coefficient of viscous traction, **68**, 672-680.

Elasticity beyond the elastic limit, **70**, 433-446.

Reissner, Eric

A new derivation of the equations for the deformation of elastic shells, **63**, 177-184.

Note on the expressions for the strains in a bent, thin shell, **64**, 768-772.

Ribeiro, Hugo

A remark on Boolean algebras with operators, **74**, 163-167.

Riblet, Henry J.

Algebraic differential fields, **63**, 339-346.

A differential basis for algebraic differential fields, **63**, 347-351.

Rice, S. O.

The distribution of the maxima of a random curve, **61**, 409-416.

See also Bateman and Rice.

Rich, R. P.

Completely simple ideals of a semigroup, **71**, 883-885.

Richeson, A. W.

An extension of Brahmagupta's theorem, **52**, 425-438.

Rickart, C. E.

Isomorphic groups of linear transformations, **72**, 451–464.
 Isomorphic groups of linear transformations, II, **73**, 697–716.

Riordan, John. *See* Becker and Riordan.

Ritt, J. F.

On certain points in the theory of algebraic differential equations, **60**, 1–43.
 Systems of differential equations. I. Theory of ideals, **60**, 535–548.
 Complete difference ideals, **63**, 681–690.

Ritt, J. F. (and Doob, J. L.)

Systems of algebraic difference equations, **55**, 505–514.

Roberts, J. H.

Concerning collections of continua not all bounded, **52**, 551–562.
 Concerning metric collections of continua, **53**, 422–426.
 A problem in dimension theory, **70**, 126–128.

Robertson, M. S.

Analytic functions star-like in one direction, **58**, 465–472.
 On the order of the coefficients of a univalent function, **59**, 205–210.

Robinson, Chas. V.

Spherical theorems of Helly type and congruence indices of spherical caps, **64**, 260–272.

Robinson, G. de B.

On the representations of the symmetric group, **60**, 745–760.
 Note on a paper by R. H. Bruck and T. L. Wade, **64**, 753.
 On the representations of the symmetric group (second paper), **69**, 286–298.
 On the representations of the symmetric group (third paper), **70**, 277–294.
See also Thrall and Robinson.

Robinson, Selby

Covering theorems in general topology, **55**, 421–436.
See also Chittenden and Robinson.

Robison, George M.

Summability of infinite products, **51**, 653–660.

Room, T. G.

A synthesis of the Clifford matrices and its generalization, **74**, 967–984.

Rose, I. H.

On the cohomology theory for associative algebras, **74**, 531–546.

Rosenbaum, Benjamin

On the irreducibility of certain classes of polynomials, **61**, 923–933.

Rosenberg, Alex

The number of irreducible representations of simple rings with no minimal ideals, **75**, 523–530.

Rosenblatt, A.

On the movement of a cosmic cloud, **66**, 268–280.

Rosenbloom, Paul C.

Post algebras. I. Postulates and general theory, **64**, 167–188.

Rosenlicht, Maxwell

Simple differentials of second kind on Hodge manifolds, **75**, 621–626.

Rosenthal, Jenny E.

Note on the numerical value of a particular mass ratio in the restricted problem of three bodies, **53**, 258.

The equation of stability of periodic orbits of the restricted problem of three bodies in Thiele's regularising coördinates, **53**, 626–630.

Rosenthal, E.

On some cubic diophantine equations, **65**, 663–672.

Multiplicative diophantine equations in quaternions, **71**, 791–799.

Ross, Arnold E.

On representation of integers by indefinite ternary quadratic forms of quadratfrei determinant, **55**, 293–302.

On a problem of Ramanujan, **68**, 29–46.

Ross, Arnold E. (and Pall, Gordon)

An extension of a problem of Kloosterman, **68**, 59–65.

Rosser, Barkley

Explicit bounds for some functions of prime numbers, **63**, 211–232.

Rothe, Erich H.

On non-negative functional transformations, **66**, 245–254.

A remark on isolated critical points, **74**, 253–263.

Rusk, Evelyn Carroll. See Carroll-Rusk, Evelyn.**Rust, W. M., Jr.**

Integral equations and the cooling problem for several media, **54**, 190–212.

The cooling problem for spherical regions, **55**, 340–348.

Rutt, Norman E.

Concerning the cut points of a continuous curve when the arc curve, *AB*, contains exactly *N* independent arcs, **51**, 217–246.

Some theorems on triodic continua, **56**, 122–132.

Ryser, H. J.

Matrices with integer elements in combinatorial investigations, **74**, 769–773.

Sagen, O. K.

The integers represented by sets of positive ternary quadratic non-classic forms, **59**, 33–42.

Salem, R.

On sets of multiplicity for trigonometrical series, **64**, 531–538.

Samelson, Hans

A connection between the Whitehead and the Pontryagin product, **75**, 744–752.

Samuel, P.

On conformal correspondence of surfaces and manifolds, **69**, 421–446.

Santaló, L. A.

A theorem and an inequality referring to rectifiable curves, **63**, 635–644.

Integral geometry in Hermitian spaces, **74**, 423–434.

Sard, Arthur

Best approximate integration formulas; best approximation formulas, **71**, 80–91.

Sathe, L. G.

On a congruence property of the divisor function, **67**, 397–406.

Schaeffer, A. C.

The Fourier-Stieltjes coefficients of a function of bounded variation, **61**, 934–940.

See also Duffin and Schaeffer.

Schaeffer, A. C. (and Szegö, G.)

Polynomials whose real part is bounded on a given curve in the complex plane, **62**, 868–876.

Schafer, Alice T.

The neighborhood of an undulation point on a space curve, **70**, 351–363.

Schafer, R. D.

The exceptional simple Jordan algebras, **70**, 82–94.

Structure of genetic algebras, **71**, 121–135.

Scheid, Francis

On the asymptotic shape of the cavity behind an axially symmetric nose moving through an ideal fluid, **72**, 485–501.

Schelkunoff, S. A.

On rotations in ordinary and null spaces, **53**, 175–185.

Schenkman, Eugene

A theory of subinvariant Lie algebras, **73**, 453–474.

Schiffer, Menahem

Variation of the Green function and theory of the *p*-valued functions, **65**, 341–360.

Hadamard's formula and variation of domain-functions, **68**, 417–448.

An application of orthonormal functions in the theory of conformal mapping, **70**, 147–156.

See also Bergman and Schiffer.

Schilling, O. F. G.

Some remarks on class field theory over infinite fields of algebraic numbers, **59**, 414–422.

The structure of local class field theory, **60**, 75–100.

A generalization of local class field theory, **60**, 667–704.

Foundations of an abstract theory of Abelian functions, **61**, 59–80.

A remark on normal extensions, **61**, 388–396.

Units in *p*-adic algebras, **61**, 883–896.

Remarks on a special class of algebras, **62**, 346–352.

Normal extensions of relatively complete fields, **65**, 309–334.

See also MacLane and Schilling.

Schilling, O. F. G. (and Zariski, Oscar)

On the linearity of pencils of curves on algebraic surfaces, **60**, 320–324.

Schneckenburger, Edith R.

On 1-bounding monotonic transformations which are equivalent to homeomorphisms, **63**, 768–776.

Schoenberg, I. J. *See* Bliss and Schoenberg.

Schoonmaker, Hazel Edith

Non-monoidal involutions having a congruence of invariant conics, **51**, 439-464.

Homomorphisms of a semigroup onto a group, 73, 475-481.

Stone, M. H.

Postulates for Boolean algebras and generalized Boolean algebras, 57, 703-732.

Note on formal logic, 59, 506-514.

Straus, E. G. (and Valentine, F. A.)

A characterization of finite dimensional convex sets, 74, 683-686.

Strodt, Walter

Principal solutions of difference equations, 69, 717-757.

Strömgren, Elis

Periodic orbits in the restricted problem of three bodies in their relation to Hill's work on the motion of the moon, 60, 867-879.

Su, Buchin

Osculating conics of the plane sections through a point of a surface, 65, 439-449.

Plane sections through a point of a non-holonomic surface, 65, 701-711.

Suckau, J. W. Theodore

On uniform convergence, 57, 549-561.

Sugar, Alvin

A cubic analogue of the Cauchy-Fermat theorem, 58, 783-790.

Ideal Waring theorem for the polynomial $m(x^3 - x)/6 - m(x^2 - x)/2 + x$, 59, 43-49.

Swingle, P. M.

Generalized indecomposable continua, 52, 647-658.

Generalizations of biconnected sets, 53, 385-400.

Biconnected and related sets, 54, 525-535.

Synge, J. L.

Some intrinsic and derived vectors in a Kawaguchi space, 57, 679-691.

Szász, Otto

On the partial sums of certain Fourier series, 59, 696-708 (Errata, 59, 1004; 61, 177).

Some extremum problems in the theory of Fourier series, 61, 165-177.

On convergence and summability of trigonometric series, 64, 575-591.

On Lebesgue summability and its generalization to integrals, 67, 389-396.

Quasi-monotone series, 70, 203-206.

Tauberian theorems for summability (R_1), 73, 779-791.

See also Chandrasekharan and Szász.

Szegö, G.

On conjugate trigonometric polynomials, 65, 532-536.

See also Pólya and Szegö.

See also Schaeffer and Szegö.

Szekeres, Gy.

On an extremum problem in the plane, **63**, 208–210.

Taam, Choy-Tak

Oscillation theorems, **74**, 317–324.

Tarski, Alfred. *See* Jónsson and Tarski.**Tartler, A.**

On a certain class of orthogonal polynomials, **57**, 627–644.

Taylor, A. E.

Biharmonic functions in abstract spaces, **60**, 416–422.

See also Bochner and Taylor.

Taylor, Mildred E.

A determination of the types of planar Cremona transformations with not more than 9 *F*-points, **54**, 123–128.

Thielman, Henry P.

On the invariance of a generalized Gramian in a Riemannian function space, **56**, 438–444.

A note on a functional equation, **73**, 482–484.

Thomas, Joseph Miller

Eliminants, **69**, 592–598.

Thomas, Tracy Yerkes

The existence theorems in the problem of the determination of affine and metric spaces by their differential invariants, **52**, 225–250.

On closed spaces of constant mean curvature, **58**, 702–704.

Extract from a letter by E. Cartan concerning my note: On closed spaces of constant mean curvature, **59**, 793–794.

Singular maps of differentiable manifolds of *N* dimensions into *N* dimensional Euclidean space, **61**, 403–408.

Qualitative analysis of the flow of fluids in pipes, **64**, 754–767.

Thompson, William R.

On the possible forms of discriminants of algebraic fields, I, **53**, 81–90.

On the possible forms of discriminants of algebraic fields, II, **55**, 111–118.

On the theory of apportionment, **57**, 450–456.

Thrall, Robert M.

Metabelian groups and trilinear forms, **60**, 383–415.

On symmetrized Kronecker powers and the structure of the free Lie ring, **64**, 371–388.

Thrall, R. M. (and Duncan, D. G.)

Note on free modular lattices, **75**, 627–632.

Thrall, R. M. (and Robinson, G. de B.)

Supplement to a paper of G. de B. Robinson, **73**, 721–724.

Thron, W. J.

Twin convergence regions for continued fractions $b_0 + K(1/b_n)$, **66**, 428–438.

Twin convergence regions for continued fractions $b_0 + K(1/b_n)$, II, **71**, 112–120.
